

THIS IS ONLY THE BEGINNING

MANIFESTO

Elevating the future of Nepal's Digital Landscape

PIXEL BY PIXEL

OUR SCOPE & PILLARS

Every movement starts with a clear direction. Ours begins in classrooms, where students discover new possibilities through technology and digital education. Yet our ambition extends well beyond those four walls. By integrating education, digital content, volunteer engagement, and open-source innovation, we've built a model designed not only to create immediate impact but to scale sustainably. These four pillars are more than organizational divisions, they are the blueprint for a future where every student in Nepal can learn, create, and succeed regardless of geography or circumstance.

T

TEACH

Through passionate volunteers, we deliver hands-on workshops, mentorship, and practical learning experiences that build digital confidence and inspire lifelong curiosity.

R

REACH

Opportunity should never depend on geography. We bring digital literacy directly into schools and communities, ensuring students across Nepal have access to meaningful learning experiences.

B

BUILD

Our Open Source Foundation develops tools, platforms, and digital infrastructure that empower educators, volunteers, and students long after a workshop ends.

C

CREATE

Great education starts with great resources. We design curriculum, learning materials, visual content, translations, and digital experiences that make technology accessible, engaging, and scalable.

IMPACT VISION & GOALS

Before there is a masterpiece, there is a Pixel.

Every picture, every animation, every innovation displayed on a screen begins with a pixel. A pixel so small and unnoticed yet holding great purpose. Together, pixel by pixel they tell stories, spark ideas, and shape the way we see the world.

Our vision begins the same way.

Every workshop we deliver, every resource we publish, and every tool we build is a step toward a larger vision. While our impact today is measured one student, one volunteer, and one school at a time, our ambition extends far beyond individual programs. Over the next year, we will strengthen each of our four pillars, creating a foundation for a nationwide movement that empowers every young person in Nepal to learn, create, and lead in a digital world.

TEACH

Expand our educational outreach to at least 20 districts across Nepal, empowering a cohort of 5,000 students through hands-on workshops, mentorship, and practical digital literacy programs.

REACH

Establish a community technology hub in a rural Nepali school by providing essential computer infrastructure, while funding five students to pursue innovation programs, and national or international competitions.

BUILD

Design, develop, and deploy open-source technologies that solve real problems for the Nepali community, creating tools that are actively adopted by schools, educators, nonprofits, and the public.

CREATE

Launch Nepal's first comprehensive digital learning platform inspired by Khan Academy, featuring over 50 hours of Nepali-friendly video courses and structured learning resources freely accessible to every student.

JOIN THE MOVEMENT

Educational Institutions, (I)NGOs, Corporations, Students, Content Creators, Developers

everyone from Professionals to Beginners are welcome to contribute and help make this vision a reality.

Every role matters. Every contribution counts. Every person belongs.
